Carolina Eye Associates Aesthetic Services • Cutera Photo Genesis

Laser Skin Spot Removal
Treatment of Skin Redness, Brown Spots & Sun Damage

Photo Genesis is an innovative way to quickly, safely and comfortably improve your skin’s texture, tone and color on your face without gel or topical anesthetics. Signs of sun damage and age spots will usually flake off after one or two treatments, leaving clearer, younger looking skin.

What can be treated?
- Treats sun damage
- Treats skin redness
- Treats brown spots
- Treats freckles

The pulsed light system is exceptionally effective for treating skin redness (rosacea), brown spots and sun damage at a very comfortable energy level.

What do treatments feel like?
- Will I need to have an anesthetic?
  No. The Photo Genesis treatment requires no topical anesthetic.

- Will the spots reappear over time?
  Many patients see significant improvement within two to three weeks of treatment. Your complexion will be clearer and younger looking. However, your final result may not be apparent for a month or more.

When will I see results?
Many patients see significant improvement within two to three weeks of treatment. Your complexion will be clearer and younger looking. However, your final result may not be apparent for a month or more.

Do you offer any financing options?
Yes. Carolina Eye Associates offers the services of CareCredit, North America’s leading patient payment program. CareCredit offers several payment options including the popular 3 and 6 month no-interest plans.
